

Thinkphp 扩展使用 redis

使用 phpinfo()函数查看 PHP 的版本信息，这会决定扩展文件版本

PHP Version 5.5.12

System	Windows NT PC-20140626QTOK 6.1 build 7601 (Windows 7 Ultimate Edition Service Pack 1) i586
Build Date	Apr 30 2014 11:13:46
Compiler	MSVC11 (Visual C++ 2012)
Architecture	x86

 经验
jingyan.baidu.com

根据 PHP 版本号，编译器版本号和 CPU 架构，

选择 php_redis-2.2.5-5.5-ts-vc11-x86.zip 和

php_igbinary-1.2.1-5.5-ts-vc11-x86.zip

下载地址：

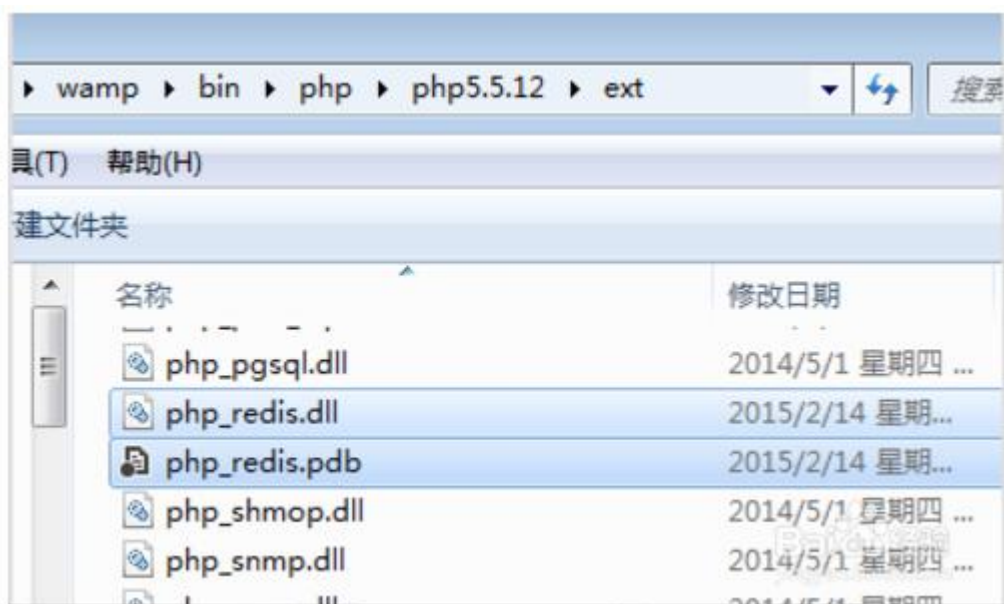

<http://windows.php.net/downloads/pecl/snaps/redis/2.2.5/>

<http://windows.php.net/downloads/pecl/releases/igbinary/1.2.1/>

7/1/2014 3:09 PM	<dir> logs
2/14/2015 12:48 PM	275106 php_redis-2.2.5-5.3-nts-vc9-x86.zip

8/29/2014 8:52 AM	121378 php_igbinary-1.2.1-5.5-ts-vc11-x86.zip

解压缩后，将 php_redis.dll 和 php_redis.pdb 拷贝至 php 的 ext 目录下

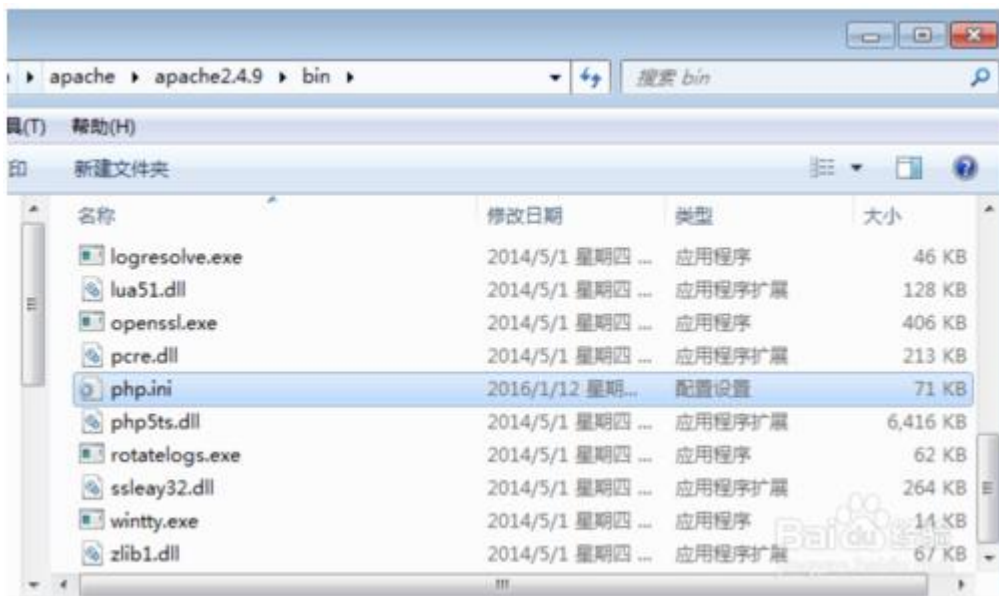

修改 php.ini，(PS：此 php.ini 文件是在 Apache 目录) 在该文件中加入：

; php_redis

extension=php_igbinary.dll

extension=php_redis.dll

注意：extension=php_igbinary.dll 一定要放在 extension=php_redis.dll 的前面，否则此扩展不会生效

```
extension=php_xmllrpc.dll
extension=php_xsl.dll
;extension=php_opcache.dll
extension=php_igbinary.dll
extension=php_redis.dll
```

```
; ~~~~~
; Module Settings ;
; ~~~~~
```

重启 Apache 后，使用 phpinfo 查看扩展是否成功安装

redis

Redis Support	enabled
Redis Version	2.2.7

新建一个 test.php 页面

```
.  
<?php  
.  
$redis=new Redis();  
.  
$redis->connect('192.168.1.11',6379);  
.  
$redis->auth('123456');  
.  
$redis->set('test','helloworld');  
.  
echo $redis->get('test');  
.  
?>
```

```
4 use Think\Cache\Driver\Redis;
```

```

/**
 * redis: set key val
 * Enter description here ...
 */
public function rsetVal($_key, $_val){
    if ( empty($_key) || empty($_val)) {
        return null;
    }

    //phpinfo();
    $redis = new \Redis();
    $res = $redis->connect('192.168.56.101', 6379);
    //dump($res);

    $redis->auth('123456');
    $redis->set('test','helloworld');
    echo $redis->get('test');
}

```
